CYSE695-Bridge 2: Hands-On Lab Report 1

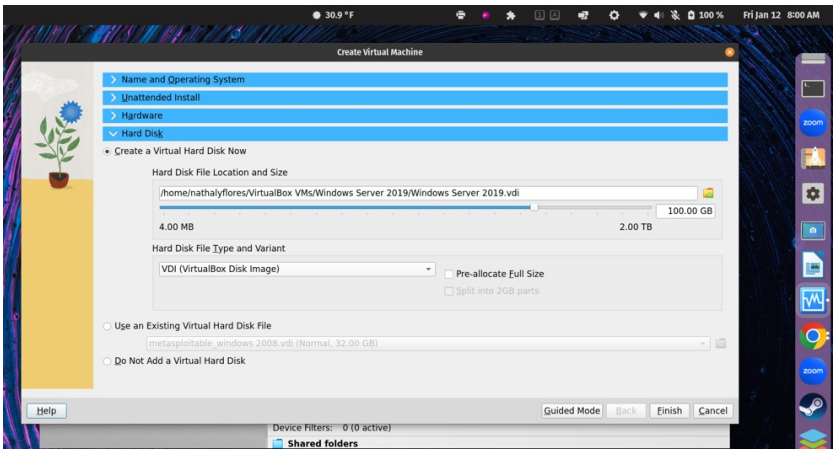

Name: Nathaly Flores

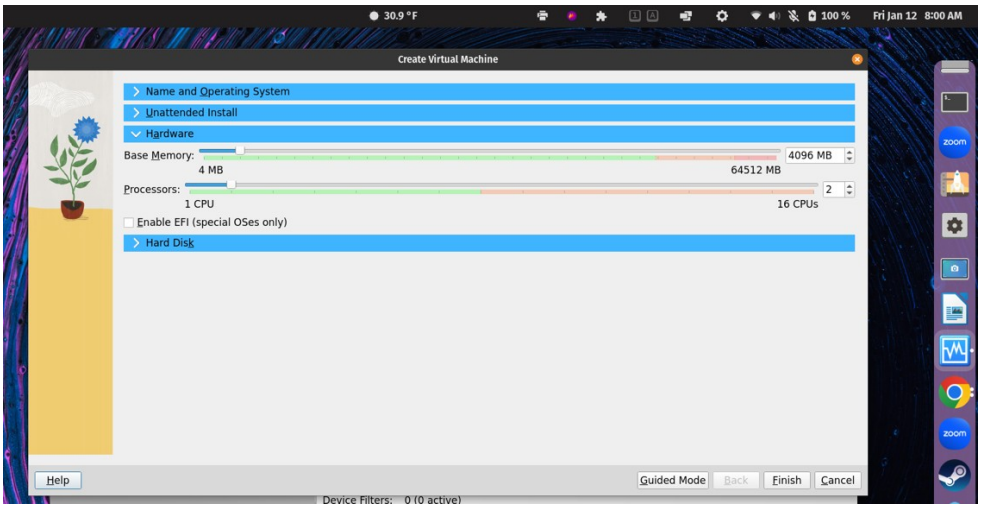

Directions: Review the tutorial video found in Module 1 and complete the following tasks. Submit your completed report in Canvas.

Task 1.

1. Mount the ISO image to install.
2. Provide a screenshot of the completed task.

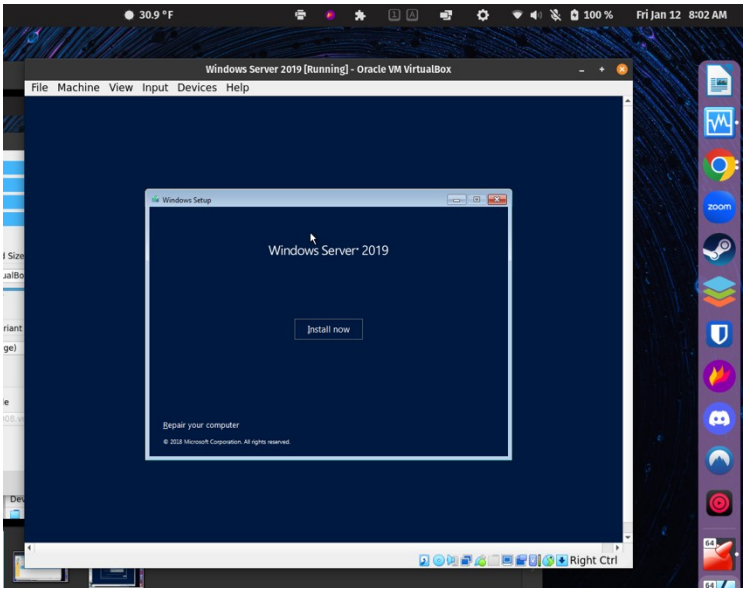

In the above screenshot, I finally bypassed the installation process from Windows Server 2019 and mounted it to my VirtualBox. I had problems with it before asking for a key product number, so I kept googling how to bypass it and found it. I can now proceed with adding 2CPU and RAM of 4096 with a 100 GB hard drive. I removed the floppy and only kept the hard disk and optical.

Task 2.

1. Start the installation process.
2. Provide a screenshot of the completed task.

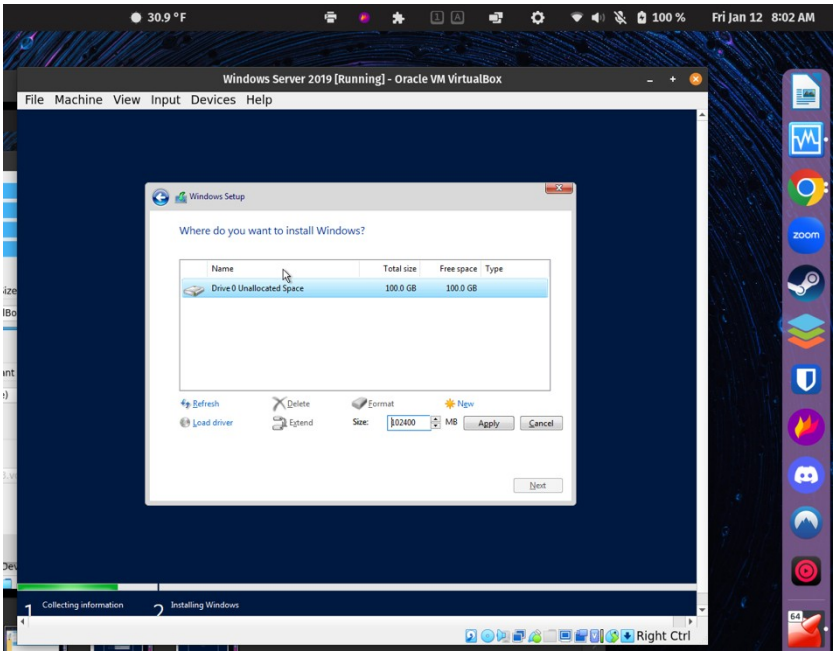

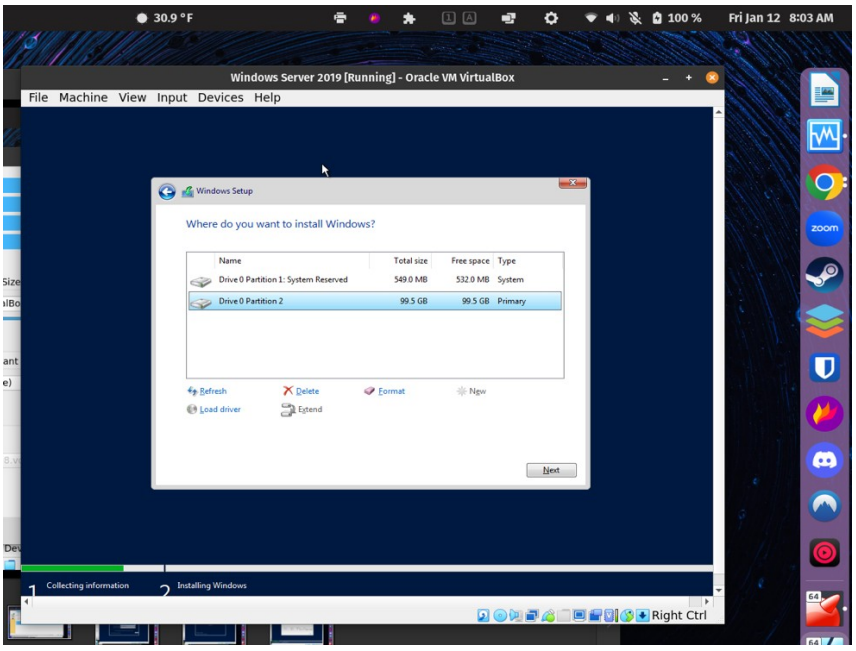

After I made all the necessary changes to the Windows server 2019, I was able to start my installation process, and I clicked install now since we do not need to repair this virtual box, so that was not clicked on. Also, we are using version of datacenter evaluation.

Task 3.

1. Create true partitions on your virtual hard disk.
2. Provide a screenshot of the completed task.

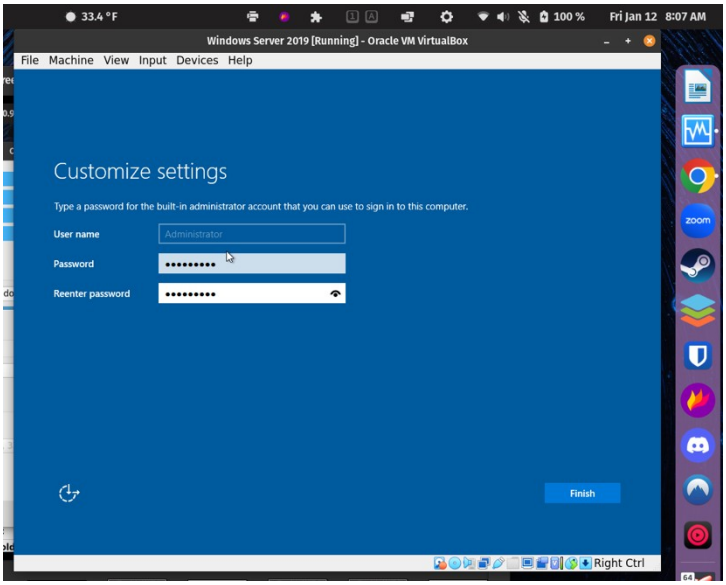

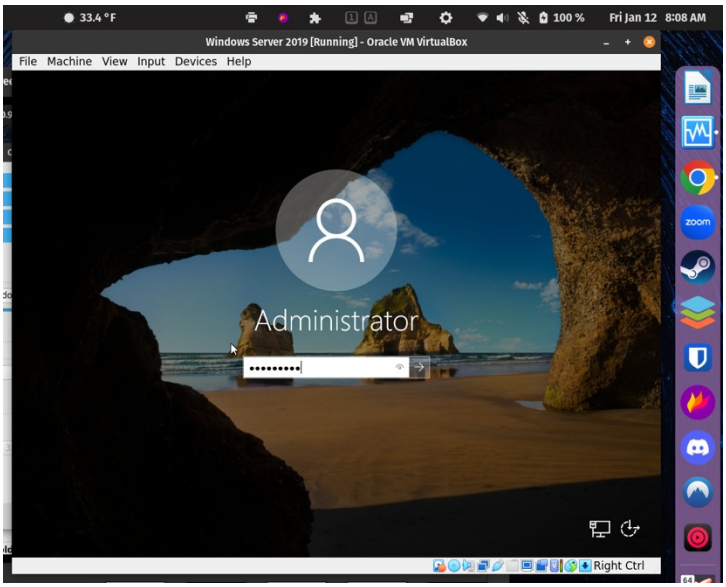

In the screenshot above, in the beginning, I added a 100 GB hard drive; once I got to the partition section, it automatically added the 102400 MB, and then I clicked on ‘new’ and created a partition that would allow me to have a secondary partition and use it, then from here, we hit next to proceed with the install.

Task 4.

1. Set a password for your administrator account.
2. Provide a screenshot of the completed task.

I created a password for this Administrator account on Windows Server 2019 and could log in afterward and continue to do what the YouTube video asked, like installing the insert guest additions CD image in the C://drive.
