CYSE695-Bridge 2: Hands-On Lab Report 5

Name: Nathaly Flores

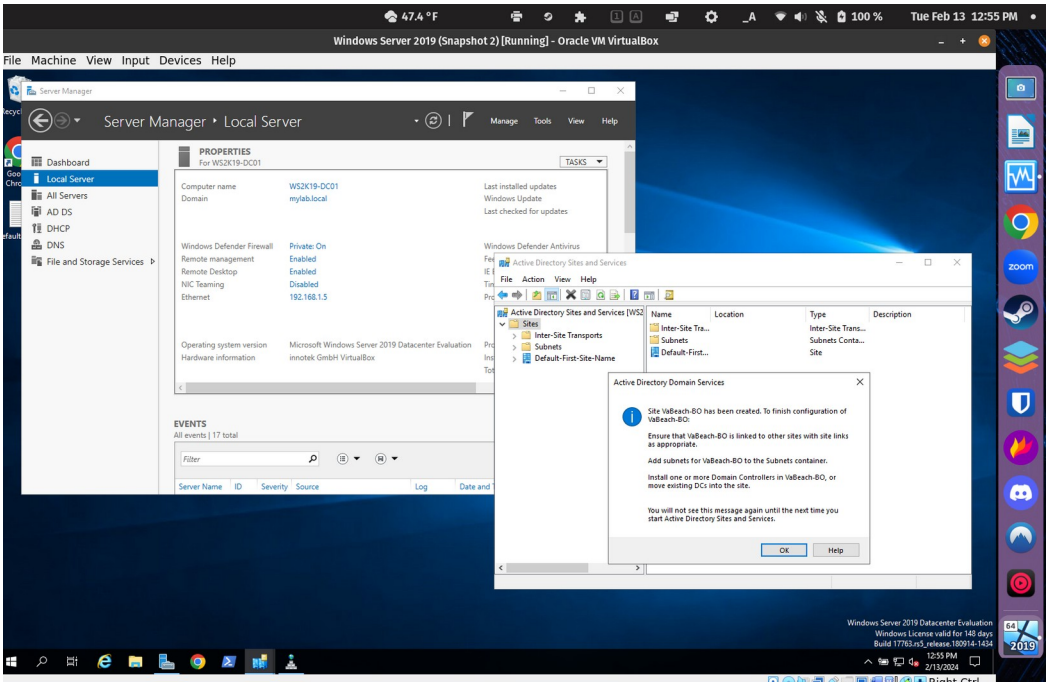

Directions: Review the tutorial video found in Module 5 and complete the following tasks. Submit your completed report in Canvas.

How to Create Active Directory Sites and Subnets

Total Points = 50 points

Task 1.

1. Create Active Directory sites.
2. Provide a screenshot of the completed task.

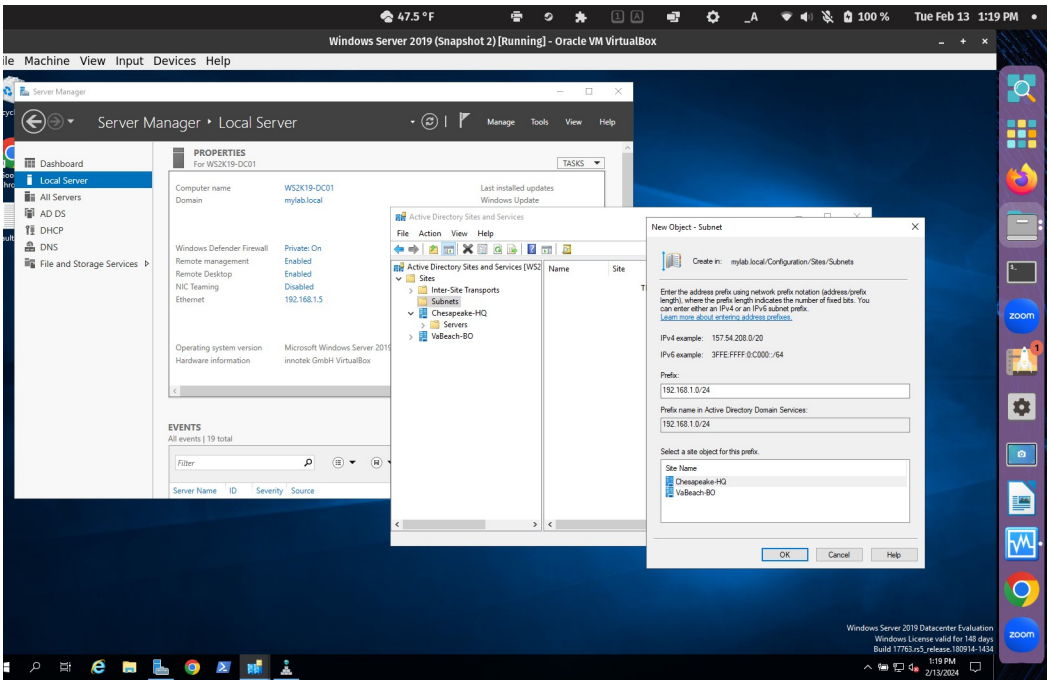

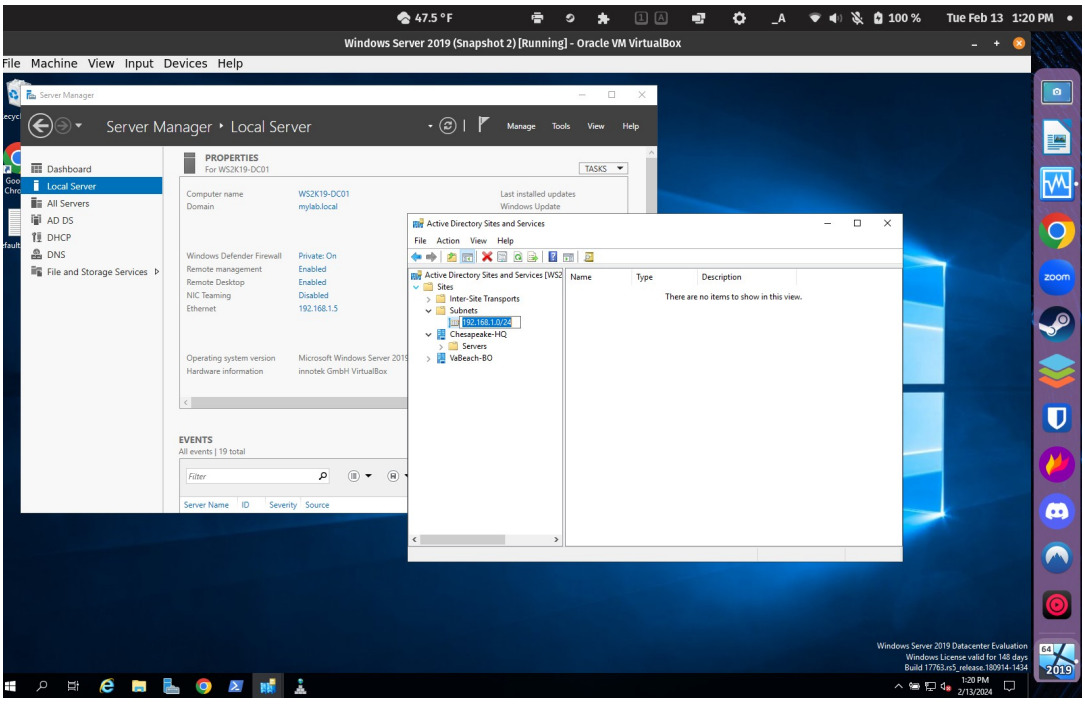

3. Briefly describe the screenshot, explaining the task or tool used.

In the above picture, I created the site Vabeach-BO and renamed my default First-Site-Name to Chesapeake-HQ under the domain controller site.

Task 2.

1. Create subnets.
2. Provide a screenshot of the completed task.

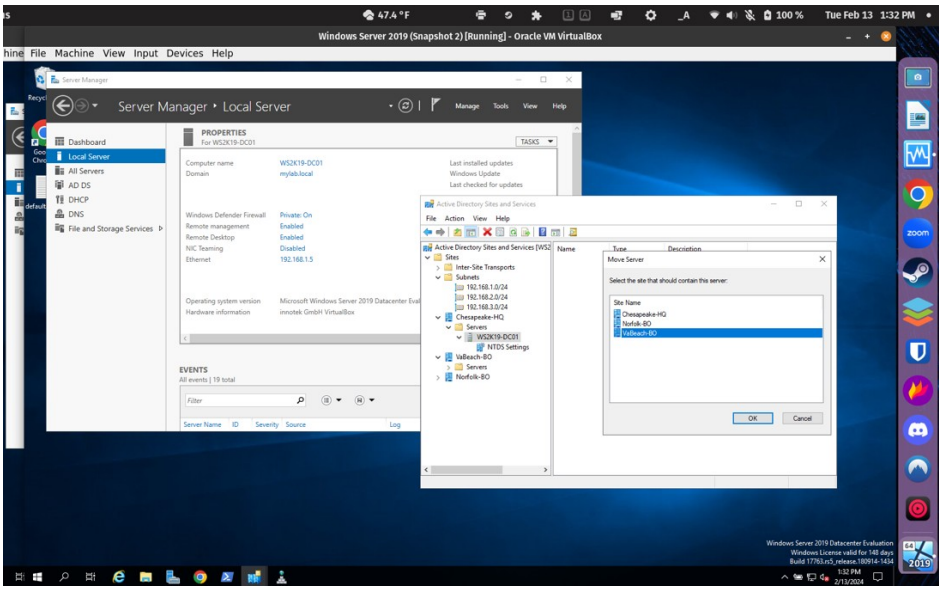

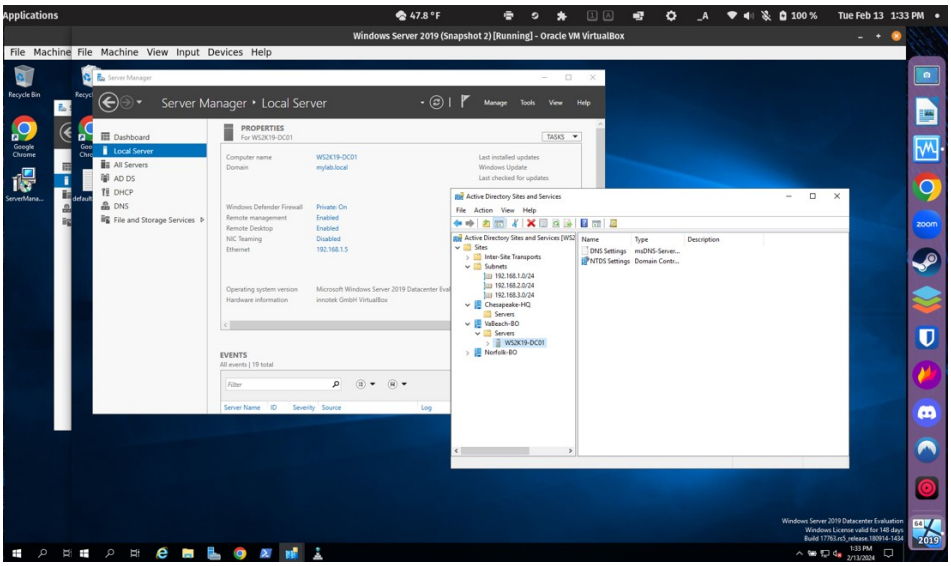

3. Briefly describe the screenshot, explaining the task or tool used.

I created the subnet under the Chesapeake HQ with the subnet IP address 192.168.1.0/24.

Task 3.

1. Move domain controller.
2. Provide a screenshot of the completed task.

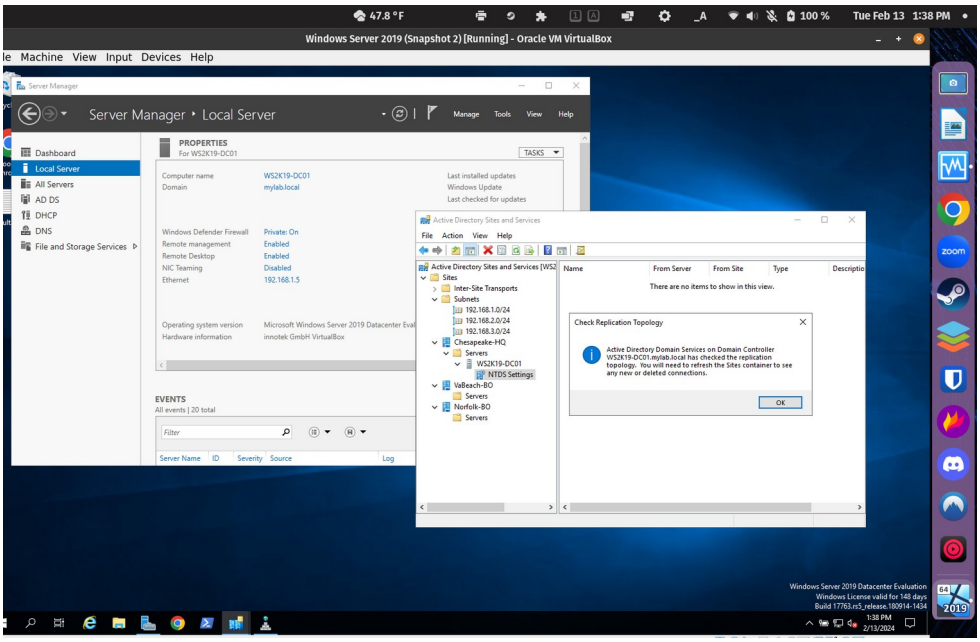

3. Briefly describe the screenshot, explaining the task or tool used.

In the above picture, I moved my server WS2K19-DC01 to VA beach-BO, and it successfully moved; the following picture shows the ‘move’ I made.

Task 4.

1. Check replication.
2. Provide a screenshot of the completed task.

3. Briefly describe the screenshot, explaining the task or tool used.

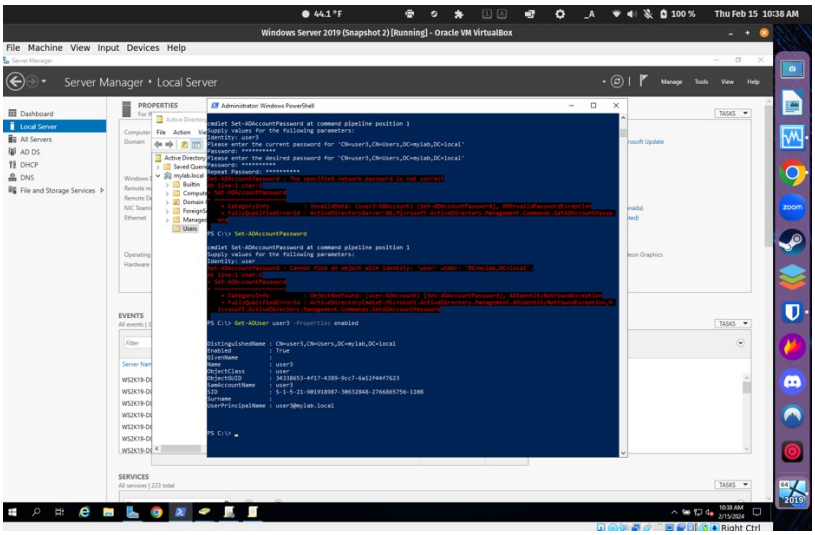

In the above picture, I replicated the screen, and it is now showing in my active directory sites and services unto my Chesapeake HQ with the server that I moved from the previous step.

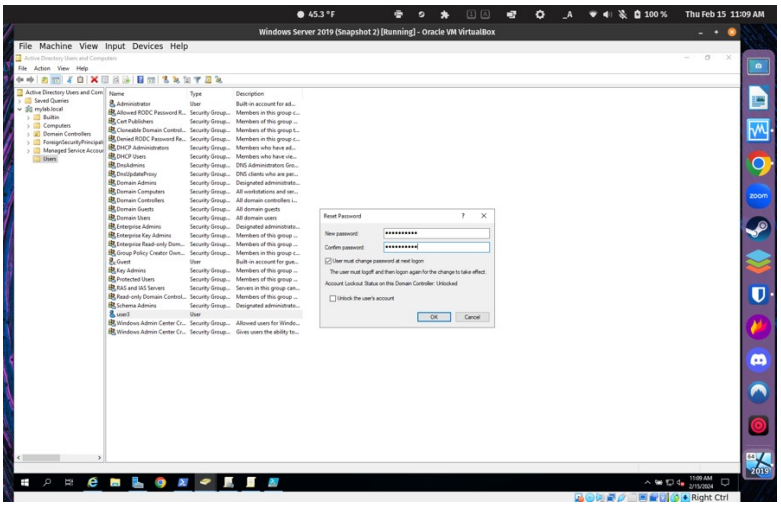

Create and Manage AD User Account Using PowerShell

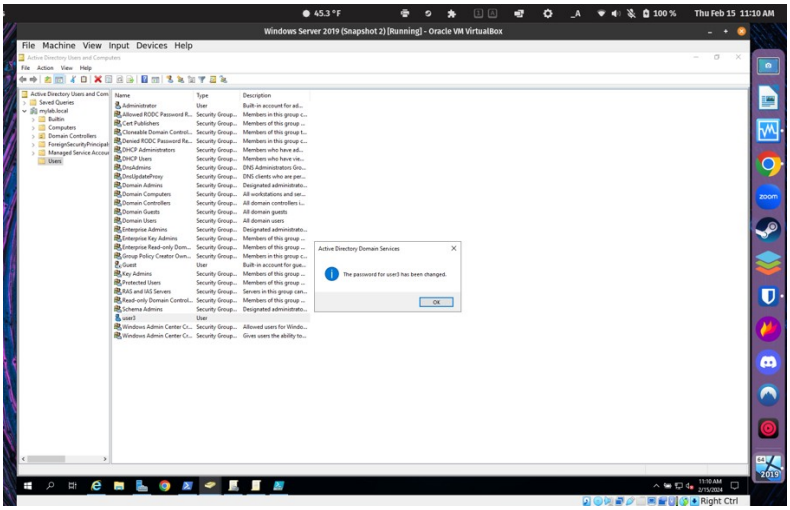

Total Point = 50 points

Task 5.

1. Assign a password.
2. Provide a screenshot of the completed task.

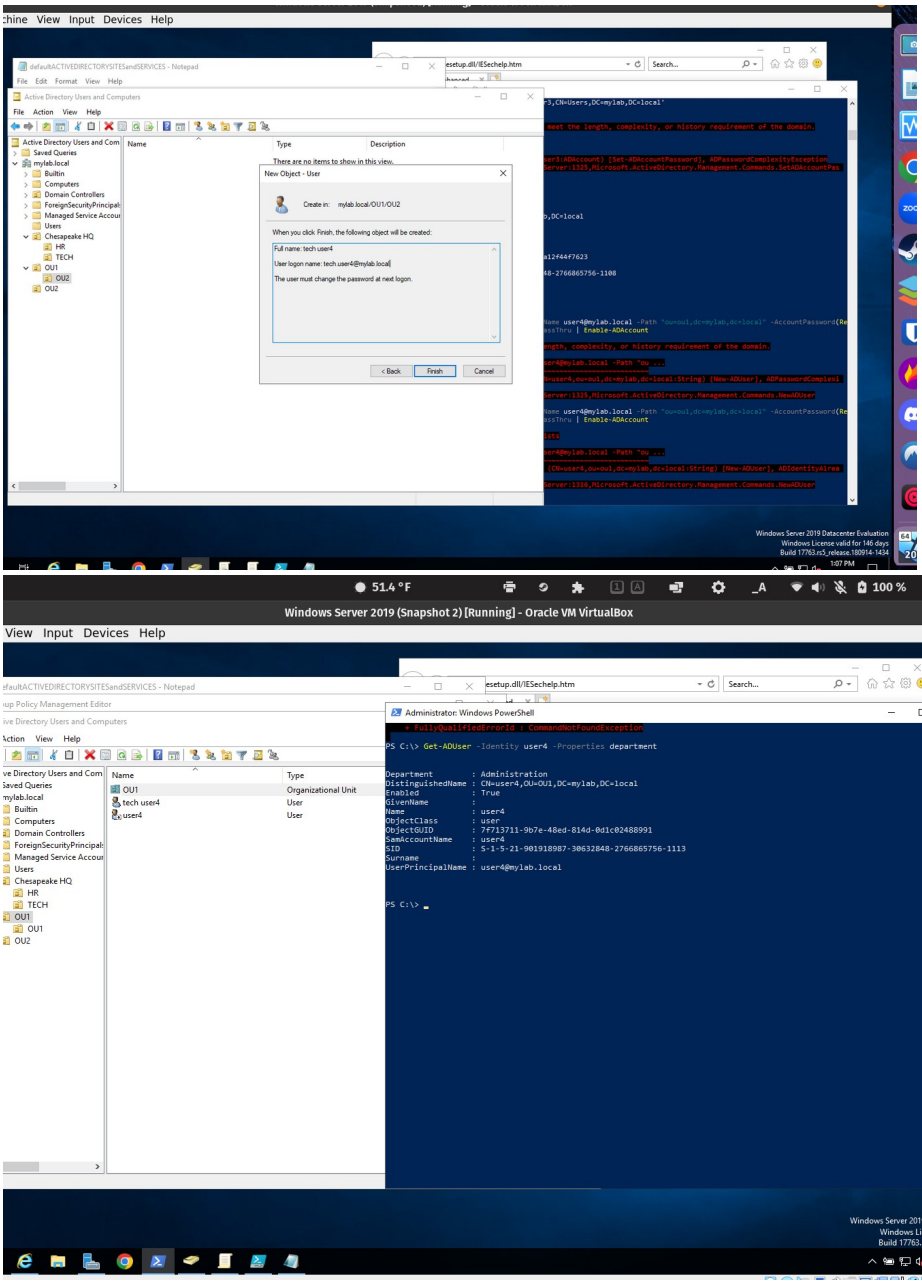

3. Briefly describe the screenshot, explaining the task or tool used.

I tried all the steps to change and set the password in PowerShell, but my password policy was very picky, so what I did I had to go to active directory users and computer manually and set the password

from user3 to get it going, and I verified it again in PowerShell, and everything went through including enabling the user three accounts also set the properties they are enabled as well.

Task 6.

1. Modify the user account.
2. Provide a screenshot of the completed task.

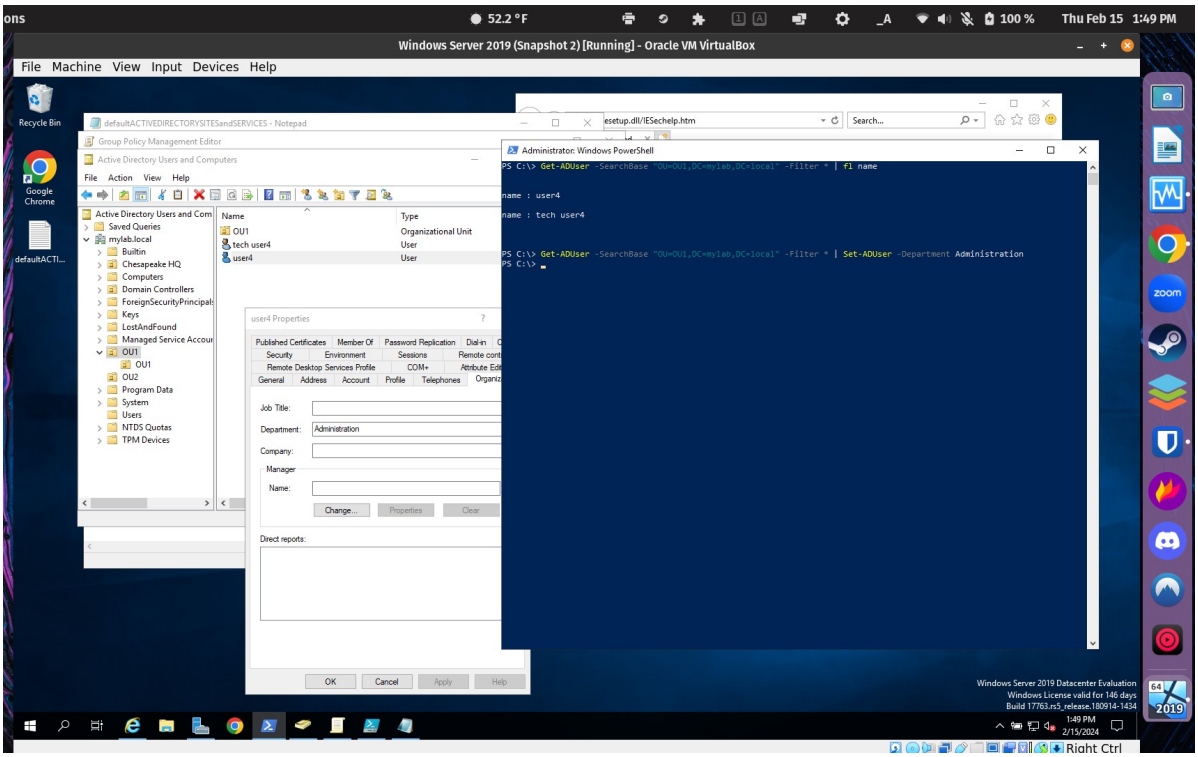

3. Briefly describe the screenshot, explaining the task or tool used.

In the above picture, I modified and created user 4 by doing command New-ADUser -Name user4 -UserPrincipalName user4@mylab.local -Path “ou=ou1,dc=mylab,dc=local” -AccountPassword (Read-

host -AsSecureString “AccountPassword”) -Passthru | Enable-ADAccount << this required a password which I did, and once again my PowerShell did not want to take it up so I had to create the password manually then Enable-ADAccount -Identity user4 and this enable user4 afterward I had to put user4 in the ‘department’ so I did Set-ADUser user4 -Department Administration and Get-ADUser -Identity user4 -Properties department. As you can see in the picture, it has a department name, Administration.

Task 7.

1. List all users.
2. Provide a screenshot of the completed task.

3. Briefly describe the screenshot, explaining the task or tool used.

In the above picture, In PowerShell, I typed in the Get-ADUser -SearchBase “OU=OU1,DC=mylab,DC=local” -Filter * | fl name. I got a list of users in that folder OU1 in my lab local. Afterward, I command Get-ADUser -SearchBase “OU=OU1,DC=mylab,DC=local” -Filter * | -Set-ADUser -Department Administration. Everything went smoothly, and as you can see above, the user4 department is in Administration.
