CYSE695-Bridge 2: Hands-On Lab Report 6

Name: Nathaly Flores

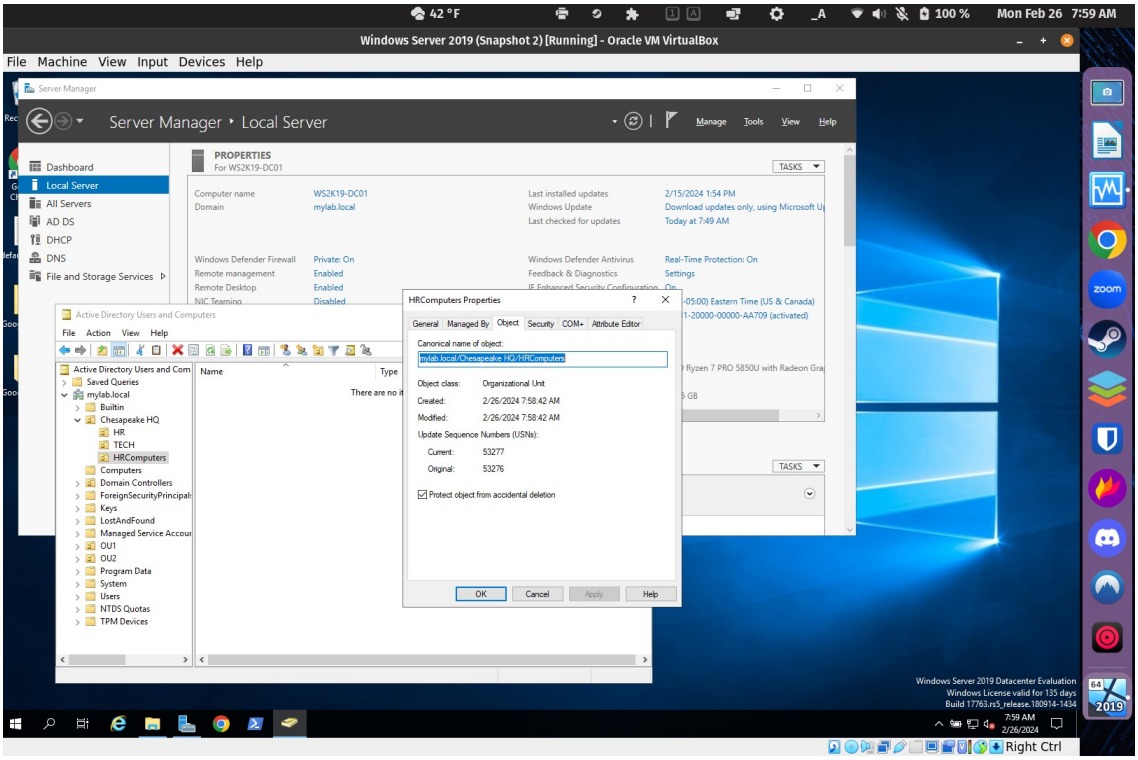

Directions: Review the tutorial video found in Module 6 and complete the following tasks. Submit your completed report in Canvas.

Install Google Chrome Using Group Policy in Windows Server 2019 Active Directory

Total Points = 50 points

Task 1.

1. Create a new object – an organizational unit.
2. Provide a screenshot of the completed task.

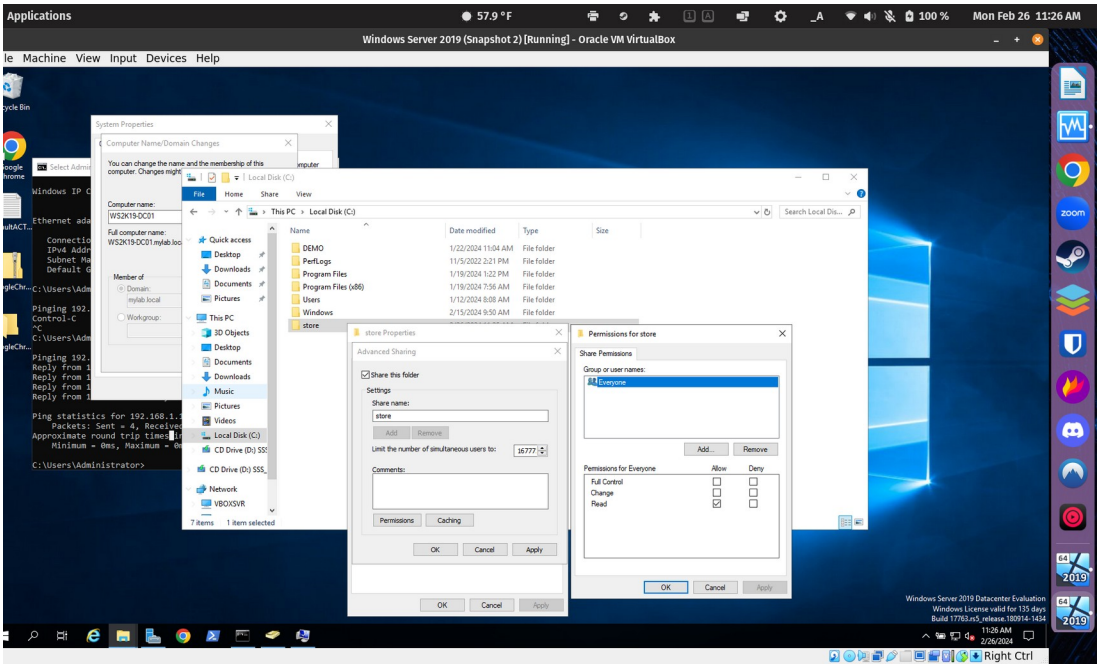

3. Briefly describe the screenshot, explaining the task or tool used.

Per the video, I created an OU (organizational Unit) under my Chesapeake HQ as HRComputers in my domain controller VM.

Task 2.

1. Apply advanced sharing.
2. Provide a screenshot of the completed task.

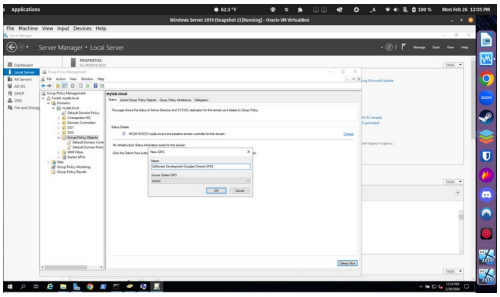

3. Briefly describe the screenshot, explaining the task or tool used.

I clicked on the local disk folder and then ‘this pc’ and created a new store folder. From there, I clicked on the properties and advanced sharing, then permissions so everyone can ‘read-only’, then ok and apply so it's effective immediately.

Task 3.

1. Create software deployment Google Chrome GPO.
2. Provide a screenshot of the completed task.

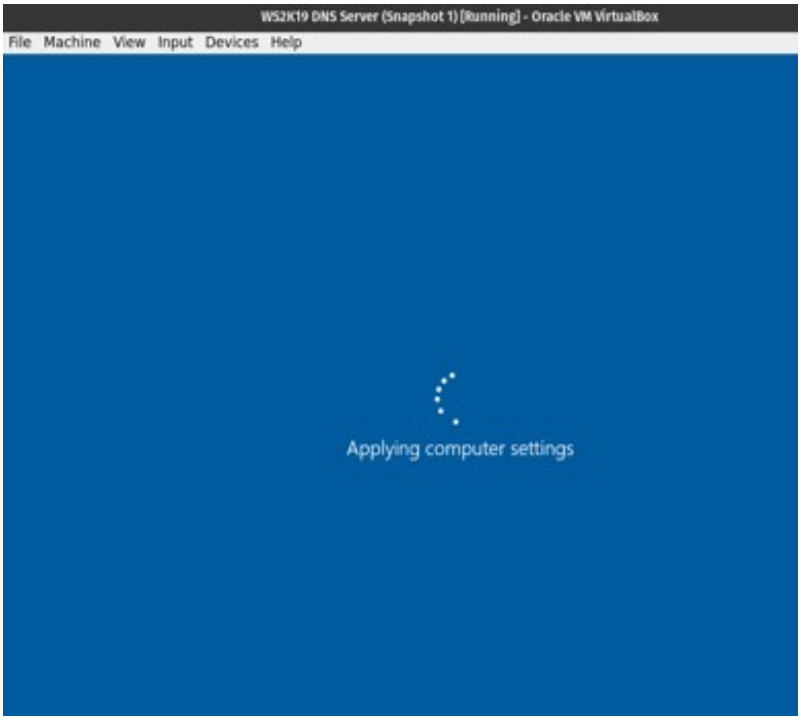

3. Briefly describe the screenshot, explaining the task or tool used.

I opened my Group Policy Management through my server manager, and then from there, I looked for my Group Policy Objects and created a new GPO named Software Deployment Google Chrome GPO then I hit ok for enter.

Task 4.

1. Restart computer.
2. Provide a screenshot of the completed task.

3. Briefly describe the screenshot, explaining the task or tool used.

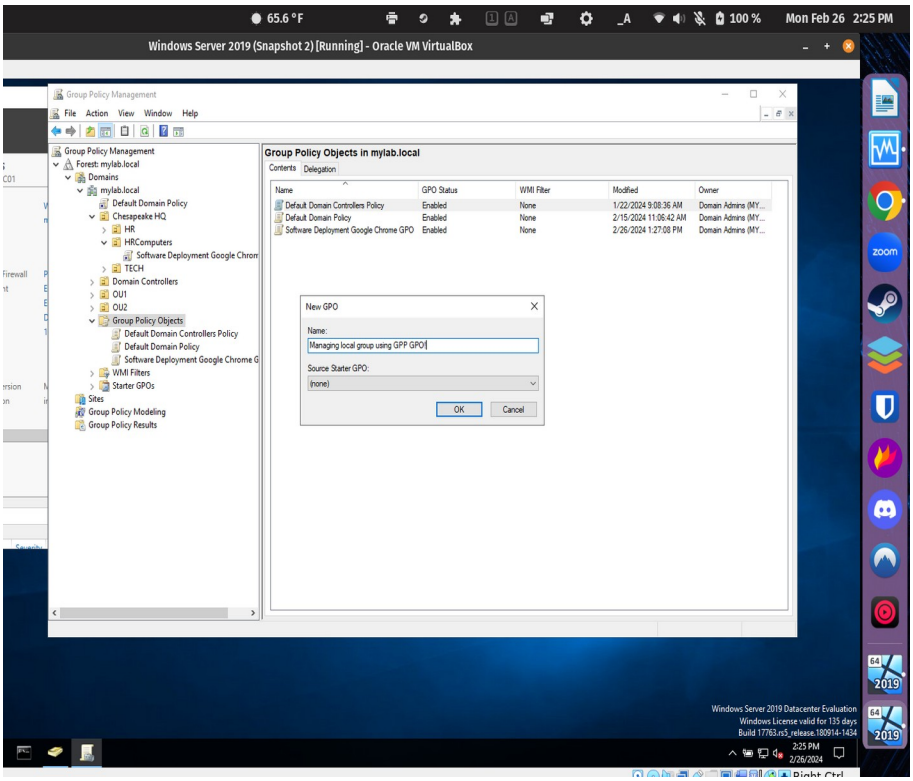

Applying the computer changes manually by restarting the computer because when I did the gpupdate /force command, it didn't do much when I said Y to add any updated policy, so the video mentioned restarting the computer, and it should take effect this way. Now, Google Chrome is installed on the client's computer.

Manage Local Groups on Clients in AD Using Group Policy Preferences

Total Point = 50 points

Task 5.

1. Create Group Policy objects.
2. Provide a screenshot of the completed task.

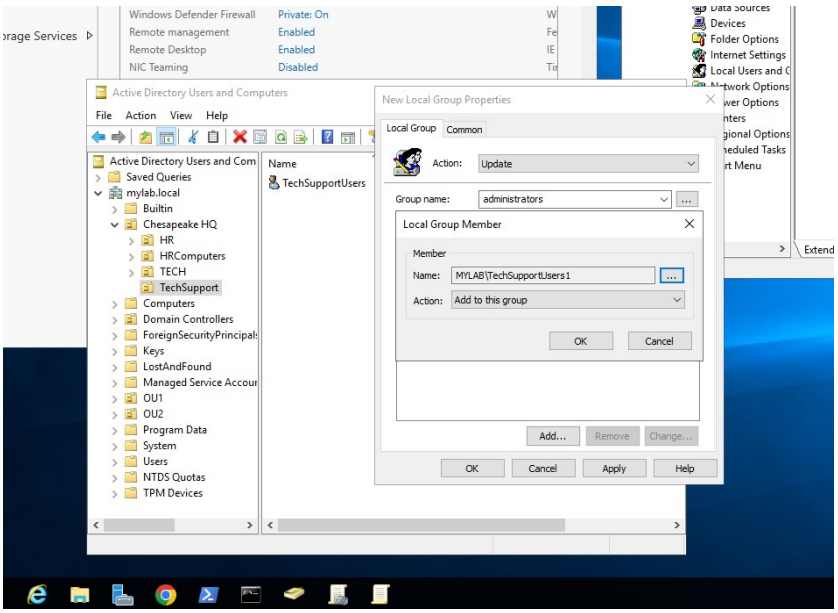

3. Briefly describe the screenshot, explaining the task or tool used.

I created a Group policy object called Managing Local Group using GPP GPO! In my domain controller.

Task 6.

1. Manage local users and groups.
2. Provide a screenshot of the completed task.

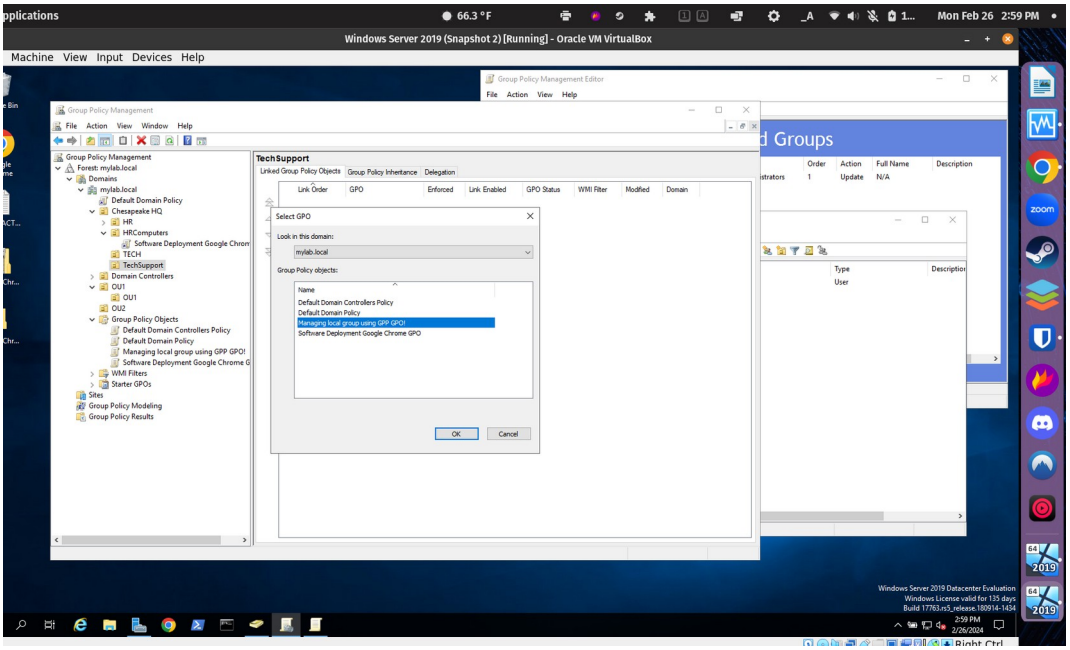

3. Briefly describe the screenshot, explaining the task or tool used.

I added TechSupportUsers1 to my Tech Support group, using Group Policy Management Editor from Local Users and Groups; from there, I did New Local Group and update and then add then … click on the three dots then Advanced > Find Now I searched for my user which is TechSupportUsers1 then added that user to my local group as it shows above in the screenshot.

Task 7.

1. Add local group administrators.
2. Provide a screenshot of the completed task.

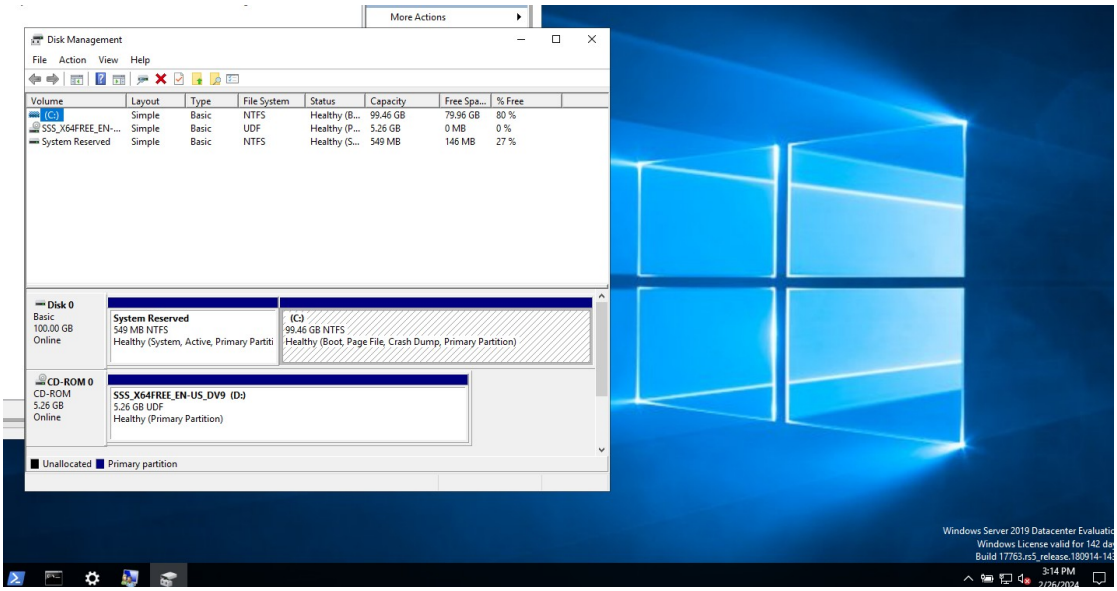

3. Briefly describe the screenshot, explaining the task or tool used.

I linked both groups together, one from my tech support folder, adding the group policy object of managing local group using GPP GPO! Into one link.

Task 8.

1. Apply disk management.
2. Provide a screenshot of the completed task.

3. Briefly describe the screenshot, explaining the task or tool used.

I did the disk management, and I do have the admin privileges to delete, but in my case, I decided not to delete just in case it affects it later on.
